PROFILE

Full Stack Developer with hands-on experience building and supporting production web applications using **React.js, Next.js, Node.js, Express.js, and MongoDB**. Experienced in owning application workflows across frontend and backend, designing REST APIs, implementing authentication and validation, optimizing MongoDB queries and API performance, and integrating third-party services. Strong focus on building reliable, maintainable applications, and delivering features across the full development lifecycle.

PROFESSIONAL EXPERIENCE

Full Stack Developer, *Dream Viewer InfoTech - Full Time*

Apr 2026 – Present | Noida

- Developed and integrated MERN applications across frontend-backend communication, REST APIs, and database workflows, owning backend functionality and application workflows.
- Contributed across assigned projects, owning application workflows spanning 25+ modules, 40+ REST API endpoints, and 35+ MongoDB collections from backend development through frontend-backend integration.
- Designed MongoDB schemas and relationships, added indexes for frequently queried fields, implemented caching that improved API response time by 40%, and built aggregation pipelines using filtering, grouping, sorting, lookup operations for efficient data retrieval.
- Implemented Express.js middleware, JWT authentication, protected routes, request validation, error handling, MVC architecture, Bcrypt protection, and modular backend components.
- Tested and validated APIs using Postman, troubleshooting integration issues and documenting endpoints, request/response formats, and workflows for team communication.

EDUCATION

Bachelor of Technology in Computer Science, *RTU, India*

Oct 2021 – Jul 2025 | Rajasthan

Full Stack Web Development, *Masai School, India*

Mar 2025 – Mar 2026 | Bengaluru

SKILLS

Frontend : React.js, Next.js, JavaScript, TypeScript, HTML, CSS, Tailwind CSS, AJAX, Axios, Vite

Backend : Node.js, Express.js, MVC, REST APIs, JWT, Bcrypt, Google Calendar API, Nodemailer, Firebase Authentication

Databases: MongoDB, MySQL, Redis, Firebase

Tools: Git, GitHub, GitLab, Postman, VS Code, IntelliJ IDEA, Terminal/CLI, Vercel, Netlify

Soft Skills : Adaptability, Communication, Problem Solving, Time Management

Other: Google Cloud, WebSockets, ESLint, Data Structures & Algorithms

PROJECTS

TTFIXON – Home Services Booking Platform [🔗](#)

- Developed a full-stack home-services platform enabling users to browse services, discover nearby professionals, and place bookings, while owning booking, service-provider availability, and admin dashboard workflows end-to-end.
- Implemented location-based service availability, allowing users to find service professionals within nearby zones.
- Implemented location-based filtering queries in MongoDB to surface nearby service professionals by zone, optimizing lookup performance for location-based search.
- Built and deployed end-to-end booking workflows using REST APIs and Razorpay, covering service discovery, location-based availability, service-provider management, online payments, and admin operations.

Tech Used : Next.js, React, JavaScript, REST APIs, Razorpay, Location/Geolocation APIs, Backend APIs [Github Link](#) [🔗](#)

Advanced Patient-Doctor Scheduling System [🔗](#)

- Built a backend-driven appointment system with separate doctor/patient workflows for scheduling and calendar synchronization.
- Designed modular Node.js, Express.js, and MongoDB workflows with data models, authentication, and external API integrations.
- Implemented JWT authentication, Bcrypt password protection, and protected API routes, while validating appointment and API workflows using Postman and resolving validation and integration issues.
- Integrated Google Calendar API and Nodemailer and deployed the application on Vercel with production environment configuration.
- Implemented validation and error handling for appointment conflicts, duplicate booking attempts, invalid requests, authentication failures, and external API errors, ensuring reliable scheduling workflows.

Tech Used - Node.js, Express.js, MongoDB, JWT, Bcrypt, Google Calendar API, Nodemailer [Github Link](#) [🔗](#)

Dynamic Travel Recommendation Engine live [🔗](#)

- Built a travel recommendation application using React.js, Node.js, MongoDB, and Firebase, handling frontend and backend workflows.
- Developed user profiles, reviews, itineraries, destination comparisons, and interactive maps.
- Designed MongoDB data models and relationships and optimized queries for frequently accessed data.
- Implemented Firebase Realtime DB and authentication, with reusable React components, Hooks, and Tailwind CSS for responsive UI.
- Improved frontend rendering performance by optimizing component re-renders with React Hooks and memoization, and leveraging Vite's build optimizations for faster page loads.

Tech Used - HTML, JavaScript, React.js, Tailwind CSS, Node.js, MongoDB, Netlify. [Github Link](#) [🔗](#)

CERTIFICATIONS

Postman API Fundamentals [🔗](#)

Postman API Fundamentals Student Expert , Postman
